ENGINEERED SOLUTIONS FOR TODAY'S RF SYSTEMS

For over 50 years, Calian SED has been providing custom RF solutions that satisfy the unique needs of satellite systems and communication services providers around the world.

SED provides full turnkey services to meet all your RF System needs. From requirements analysis, site surveys, and equipment specification, through system design and integration, test and on-site commissioning, training and long term support. Calian SED supports you through the full system life cycle.

Extensive use of COTS keeps cost, technical risks and development time down. Custom hardware and software designed by Calian SED, ensures unique requirements are satisfied.

Our highly skilled RF engineers and designers focus on solving your complex technical challenges. Our program staff work with vendors, site hosts, and you to ensure your priorities are always top of mind.
