

# MaxView for Satellite

## Automation and Autonomy

ILC's customers use MaxView's industry-leading automation capabilities to automatically configure ALL of the equipment in the RF chain, including antenna, HPA's, upconverters, downconverters, etc...

MaxView gives engineers the autonomy to define their own new automation process, without being dependent on ILC, and to ensure their NMS adapts to the ever-changing demands of their network. And their business.

MaxView network control software has helped diverse companies such as DirecTV, NBC, Echostar and PBS to better manage their networks. To learn how MaxView delivers these unique capabilities, download the Loral Skynet MaxView case study.
